

Biomarker Assessments

Biomarker Assessments evaluate your blood for insufficiencies and genetic markers, so we can provide expert guidance on your progress and what services would benefit your body most.

Micronutrient & Antioxidant Assessment

Evaluate 52 nutritional components and 48 antioxidant levels for an overview on your body's nourishment levels and Redox Score - the body's ability to fight oxidative stress. This test can help us determine the most effective services for your specific body, like nutrients and boosts offered in our IV Drips and Intramuscular (IM) Shots.

MethylDetox Assessment

Our DNA is one of the most measurable elements of how unique we are. This insightful test can evaluate your DNA for possible mutations that may be affecting the way your body overcompensates or under compensates in essential bodily functions. Like MTHFR, MTR, MTRR, COMT, and AHCY.

BENEFITS

Biomarker Assessments may help our providers guide you with:

-  Micronutrient information
-  Mutation information

WHAT TO EXPECT

 The blood draw takes only a few minutes. Then, up to 3 weeks to receive results.

 Micronutrient & Antioxidant Assessment every six months.
